

Custom product solutions from All-State

All-State makes it simple

All-State Industries offers die cutting, water jet cutting, molding, extruding and value-added customizing. Our flexibility allows us to take your drawings or specifications and turn them into the parts you need from a variety of materials. Using All-State for all your custom products simplifies the purchasing process.

Value-added service

All-State frequently takes on jobs that other manufacturers are not willing to perform. We challenge ourselves with the difficult jobs and go the extra mile to make your parts. We can line sequence, sew, rivet, drill, kit, assemble and package to your exact requirements – whatever it takes to make your parts complete.

Committed

All-State is much more than a supplier to our customers. We are a partner, committed to doing whatever it takes to give you the very best quality and service at competitive prices.

All-State is your engineered elastomer solution

Die cut

All-State Industries uses water jets or presses to cut your products to your unique specifications. We cut all types of nonmetallic products, ranging from gaskets to floor mats. Materials can be fabricated from .0031" thick unreinforced rubber to rugged 1" thick belting. If your tolerances are critical to the .001". We have the equipment and know-how to get your job done right.

Molded

All-State supplies compression, injection and transfer molded parts custom formulated to fit your needs. We will help you select the right compound for optimal quality, product-life, service and value. Your molded part can be solid rubber, rubber to metal, urethane, urethane to metal or solid plastic. Shapes ranging from intricate seals to 12" thick bearing pads are made to meet your design criteria and – if needed – meet military or F.D.A. specifications.

Extruded

All-State has a wealth of knowledge and experience with extrusions. These can be dual durometers or special colors. Some of the compounds available are EPDM, neoprene, nitrile, SBR and silicone.

Value-added

All-State's heat-cured and screen printed process adds value with visibility. Customize your product with: assembling, drilling, hole punching, machining, packaging, riveting, sewing, slitting and stapling. We also have adhesive back materials, such as, square-top and gator-hyde to add superior slip resistance. Pressure sensitive backing offers sure adhesion to fiberglass, steel, wood and powder-coated materials.

Foam

All-State produces a wide range of foam for a variety of industries. We can guide you to the proper material selection – whether it's polyurethane open-cell foam, cross-linked polyethylene or rubber sponge – depending on your acoustical, thermal or sealing requirements. We also provide a variety of surface coverings including aluminized Mylar, urethane skin, PSA and perforated vinyl.

Outstanding service

All-State provides more than just competitive pricing. All-State is synonymous with cost-effective solutions that work for you along with the best service.

A non-metallic pioneer

We have been a pioneer in the nonmetallic custom products arena since 1959. Founded on the highest quality products and outstanding service, All-State has continued to excel at die cutting, molding, extruding and customizing products for our customers.
