Custom Plastics from All-State

The value of experience

All-State Industries is a leader in custom engineered plastic components. As metal replacement experts, we can show you how high-performance plastics can improve part life, reduce wear on mating surfaces, decrease corrosion and reduce or eliminate lubrication. From simple wear strips to high-speed bushings, All-State has the solution for your component requirements.

Advanced technology

All-State utilizes state-of-the-art equipment, advanced compounds and proprietary process technology to deliver high-quality parts for your application. Our experience in component design enables us to select the proper material, machining process and initial stock shape to meet the performance, tolerance and cost requirements of your parts.

Call the experts

All-State is ready to provide answers and solutions to your current problems or future development projects. We are your partner in the design, development and production of engineered plastic components.

We have been a pioneer in the custom products arena since 1959. Founded on the highest quality products and outstanding service, All-State has continued to excel at die cutting, molding, extruding and customizing products for their customers.

All-State is your plastics partner

All-State Industries provides components machined from a wide variety of high performance plastic materials. Milling,

turning, routing and sawing is done on state-of-the-art CNC equipment.

Our focus is on wear applications such as bushings, slide pads and gears. We provide the technical assistance you need for material selection and part design parameters. Prototypes or production runs, basic or exotic materials, old parts or new designs, All-State provides solutions for your plastic requirements.
